

MS 150

A high-performance stereo system with a CD player, FM tuner and dock for your iPod/iPhone device

More than 50 years ago, harman kardon engineers developed the world's first stereo receiver – a high-performance component that combined the functions of several systems, which had previously only been available separately. That tradition continues, in style, with the advent of the multitasking harman kardon MS 150 – a sophisticated music system and alarm clock that plays music from virtually any source. As a complete high-performance system with a CD player, FM tuner and universal docking station that's designed to work with your iPod and iPhone device (not included), the MS 150 delivers high-fidelity sound from two 30-watt built-in bass-reflex loudspeakers in a compact, convenient and easy-to-use package. It also comes with auxiliary inputs for integration with other audio products – making the MS 150 a versatile music system that's perfect for the home, office or wherever you like to take in your favorite music.

Features

Advantages

Benefits

| | | |
|--------------------------------------|--|--|
| Playback from iPod/iPhone devices | Offers playback capability from most iPod and iPhone devices via a universal docking station (included) | Allows you to play digital music files from today's most popular digital music players |
| Two 30-watt bass-reflex loudspeakers | Lets you hear your favorite music from two fully integrated two-way loudspeakers | High-quality, high-performance music Space-saving design |
| Slot-loaded CD player | Compatible with formats such as CD, CD-R and CD-RW while offering shuffle, repeat and shuffle with repeat playback modes | Versatility to play different file formats Multiple playback modes |
| Sophisticated, modern design | Striking to the eye with a polished black top, futuristic oval shape, mesh grille and three-line dot matrix information display with a dimmer function | Attractive, décor-friendly design Simple to use |
| Three auxiliary audio inputs | Easily expands your entertainment experience to accommodate other audio devices such as portable players or cassette decks | Flexibility |
| 3.5mm headphone outputs | Allows for private listening from either the front or rear panel without disturbing others in the room | Flexibility |
